                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          preferably, the method is useful for promoting or suppressing proliferation or death of cancer cell, preferably liver cancer cell e.g., hepatroma cell. A pharmaceutical composition is useful for treating or preventing cell proliferative diseases. The diagnosing method and the diagnostic reagent are useful for diagnosing hepatic carcinoma, preferably hepatoma. The present sequence is used in the exemplification
The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the one or more telomerase genes by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-JUN-2002;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          335353555555555555555555<del>5</del>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     can contain deoxyribonucleotides, and can be chemically synthesised, conspressed from a vector or enzymatically synthesised. The invention also crelates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the telomerase genes in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and cransplants for the treatment of a variety of conditions. They may be used for treating cancer, restenosis, infectious diseases (specifically protozoal), transplant rejection, or autoimmune or age-related diseases, ce.g. multiple sclerosis, lupus erythematosus, AIDS, macular degeneration, construction, and generation, descreening, diagnosis, therapeutic target identification and validation, construction, and generation (service engineering, pharmacogenomics, studying gene function, and generation, of single nucleotide polymorphisms). The present sequence represents the lower strand of a human TERT-targeted double-stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the one or more telomerase genes by RNA in the following process of the sinks may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and antisense oligonucleotide. Specifically, the sinks include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, can contain deoxyribonucleotides, and can be chemically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the telomerase genes in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The siMAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human TERT-targeted double-stranded siNA, which is identical to the c-fos transcript target sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           short interfering nucleic acid; siNA; breakpoint cluster region; v-abl Abelson murine leukaemia viral oncogene homologue 1; BCR-ABL; cytostatic; leukaemia; lymphoma; human; ss; siRNA; ABL1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel double-stranded short interfering nucleic acid (siNA) that downregulates expression of the breakpoint cluster region-v-abl Abelson murine leukaemia viral oncogene homologue 1 (BCR-ABL) gene. The siRNA of the invention demonstrates cytostatic activity and may be useful for modulating expression of the BCR-ABL gene, as well as for treating leukaemia or lymphoma and in diagnosis, drug screening, target identification and validation, genetic engineering, gene function studies and gene mapping. The current sequence is that of the human ABL1-targeted siRNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           short interfering nucleic acid; siNA; breakpoint cluster region; v-abl Abelson murine leukaemia viral oncogene homologue 1; BCR-ABL; cytostatic; leukaemia; lymphoma; human; ss; siRNA; ABL1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New double-stranded interfering nucleic and diagnosis of leukemia and lymphoma, cluster region-Abelson (BCR-ABL) gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 19 BP; 5 A; 3 C; 10 G; 0 T; 1 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel double-stranded short interfering nucleic acid (siNA) that downregulates expression of the breakpoint cluster region-v-abl Abelson murine leukaemia viral oncogene homologue 1 (BCR-ABL) gene. The siNNA of the invention demonstrates cytostatic activity and may be useful for modulating expression of the BCR-ABL gene, as well as for treating leukaemia or lymphoma and in diagnosis, drug screening, target identification and validation, genetic engineering, gene function studies and gene mapping. The current sequence is that of the human ABL1-targeted siRNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human secreted/transmembrane protein, #53, PCR primer #1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC CDNAS, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generation of antisense RNA CC animals or knockout animals which are useful in the development and CC screening of therapeutically useful reagents, as probes and for the CC genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis comproses, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polymucleotides and proteins are useful for tissue typing. PRO antibodies are useful for climmunohistochemical staining and/or assays for PRO e.g. detecting its capression in specific cells, tissues or serum and for affinity profession in specific cells, tissues or serum and for affinity consisting and protein a protein and consistent of the PRO from recombinant cell culture or natural sources. The printication of PRO from recombinant cell culture or natural sources. The grant protein and protein and consistent of the PRO polymucleotide and particularly for replacing a complisty a PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cells, modulating glucose or FFA uptake, inducing proliferation and/or re-
differentiation of chondrocytes. In particular, these are useful for
detecting or treating cardiac insufficiency disorders, wounds, cancerous
tumours, retinal disorders or injuries (e.g. loss of sight due to
retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, hypoinsulinaemia, or bone or carrilage disorders (e.g. sports injuries or
arthritis) in mammals. PRO polypeptides and their portions affect the
expression of genes which have a role in cell death. The polymucleotides
are useful in molecular biology including uses as hybridisation probes
for CDNA library to isolate the full-length PRO CDNA or to isolate other.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF) stimulated proliferation of endothelial cells, modulating the proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of retinulated T-lymphocytes, enhancing the survival or proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detacting other pro-

disease, enu Novel isolated native olated native PRO polypeptide useful for treating Parkinson's enterocolitis, Zollinger-Ellison syndrome gastrointestinal on, Alzheimer's disease, amyotrophic lateral sclerosis, Usher

Example 42; SEQ ID NO 286; 471pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polymucleotides are useful as pharmaceticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF)-stimulated

CC retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or CC hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or CC expression of genes which have a role in cell death. The polynucleotides CC expression of genes which have a role in cell death. The polynucleotides CC for cDNA library to isolate the full-length PRO cDNA or to isolate other CC cDNAs, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generation of antisense RNA CC animals or knockout animals which are useful in the development and CC genetic analysis of individuals with genetic disorders as well as for CC recombinantly expressing the protein and for chromosome identification. CC protein are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify CC the pRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for cartilodies and proteins are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for affinity CC expression be used in gene therapy, particularly for replacing a CC defective gene. The sequence presented is a PCR primer which was used to CC amplify a PRO polynucleotide of the invention. stimulated T-lymphocytes, enhancing the survival or proliferation of retinal neurons or rod photoreceptor cells, inducing c-fos in endothelial cells, modulating glucose or FFA uptake, inducing proliferation and/or redifferentiation of chondrocytes. In particular, these are useful for detecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to retinitis pigmentosum), obseity, diabetes, hyperinsulinaemia, proliferation of endothelial cells, modulating the proliferation of

The method and compositions of the invention may be useful for analysing mutation and diagnosing patients affected with PKD (polycystic kidney disease). The current sequence is that of a PCR primer of the invention which was used to amplify human polycystic kidney disease PKD-1 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; PRO; primer; ss; secreted polypeptide; transmembrane polypeptide; pathological disorder; cardiac insufficiency disorder; protein secretion; pancreas; diabetes; gastrointestinal functions; mucosal lesion; psoriasis; skin disease; keratinocyte differentiation; epithelial cancer; tumour; lung squamous cell carcinoma; epidermoid carcinoma; vulva; glioma; PCR; cytostatic; cardiant; endocrine; antidiabetic; gastrointestinal;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Analyzing mutations of a target nucleic acid by detecting heteroduplexes from generated duplexes, useful for diagnosing patients affected with polycystic kidney disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 19

The CC transmembrane polypeptides) and the polynucleotides encoding them. The CC disorders and tumours, in therapeutic treatment of cardiac insufficiency CC disorders and in therapeutic treatment of cardiac insufficiency CC disorders and in therapeutic treatment of cardiac insufficiency CC disorders associated with the preservation and maintenance of treating disorders associated with the preservation and maintenance of CC gastrointestinal mucosa and the repair of acute and chronic mucosal CC lesions, and skin diseases associated with abnormal keratinocyte CC differentiation (e.g., psoriases, epithelial cancers such as lung CC squamous cell carcinoma, epidermoid carcinoma of the vulva and gliomas). CC The sequences can be used as molecular markers for protein binding CC electrophoresis purposes and can be utilised in protein-protein binding CC assays, biochemical screening assays, immunoassays and cell-based assays. This sequence represents a PCR primer used to isolate a human PRO CC polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FFXEXSONNONNONNONNONN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of novel human secreted cc and transmembrane proteins (PRO polypeptides), and the polynucleotide sequences encoding them. The polynucleotide sequences are useful in complete in generating antisense RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides compined by recombinant techniques, and in generating either transgenic animals or knock-out animals which, in turn, are useful in the development and cc screening of therapeutically useful reagents. The PRO polypeptides or their antibodies are useful in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as cancer, Alzheimer's disease or ischaemia, and in various diagnostic assays. The present sequence represents a PCR primer used in the examples of the polypeptide or antibody is not assays. The present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

ð

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise can thodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO proven and for modulating at least one biological activity of a cell. PRO polypeptide. The PRO polypeptide and for modulating a bloactive molecule to a cell expressing a PRO polypeptide. The PRO collective molecule to a cell expressing a PRO polypeptide. The PRO collective molecule to a cell expressing a PRO polypeptide or the PRO collective molecule to a cell expressing a PRO polypeptide. The PRO collective molecule to a cell expressing a PRO polypeptide or polymenties biosensors or collective. These are useful for stimulating the polypeptides or polymentics biosensors or collective. These are useful for stimulating hypertrophy of meonatal heart, inhibiting vascular endothelial cells, inducing c-fos in endothelial cells, modulating the proliferation of cells, modulating cross in endothelial cells, modulating proliferation of cells, modulating cross in endothelial cells, modulating proliferation of cells, modulating the proliferation of cells, cells, modulating the proliferation of cells, cells, modulating the proliferation of cells, modulating the proliferation of cells, inducing c-fos in endothelial cells, modulating the proliferation of artiste or cells, modulating the proliferation of substance or retain the proliferation of substance or retainst plants, properties or injuries or cells, inducing c-fos in endothelial cells, cells, inducing c-fos in endothelial cells, inducing cells and physical cells, cells, cells, cells, cells, cells, cells, cells, cells, PRO genes may also be used in gene therapy, particularly for defective gene. The sequence presented is a PCR primer which amplify a PRO polynucleotide of the invention. for replacing hich was used t ď

diagnosis of obesity and diabetes, downregul for gastric inhibitory polypeptide receptor. New short interfering nucleic acid, useful e.g. for treatment and diagnosis of obesity and diabetes, downregulates expression of the gene

u --SEQ ID NO 87; 141pp; English.

The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the human gastric inhibitory polypeptide (GIP) CC or the GIP receptor (GIPr) gene by RNA interference. The siNAs may or may CC not comprise ribonuclectides and may be double or single stranded. They CC further comprise sense and antisense regions, or alternatively are CC assembled from a sense oligonuclectide and an antisense oligonuclectide. Specifically, the siNAs include short interfering RNA (siRNA), double-CC stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs CC can be unmodified or chemically modified, can contain CC deoxyribonuclectides, and can be chemically synthesised, expressed from a CC vector or enzymatically synthesised. The invention also relates to kits CC comparison of the GIPr gene in cells, tissue explants or organisms (e.g., by ax vivo gene therapy), or in grafts and transplants for the treatment CC of a twalety of conditions. They may be used for treating treating, diagnosis, therapeutic target identification and validation, and representation and validation, and representation and validation. genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human GIPr-targeted double-stranded 6 GIPr transcript target ide polymorphisms). The present sequence human GIPr-targeted double-stranded

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                          The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the human gastric inhibitory polypeptide (GIP) or the GIP receptor (GIP) gene by RNA interference. The siNAs may or may contromprise ribonucleotides and may be double or single stranded. They CC further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-cC stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs cC can be unmodified or chemically modified, can contain 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best
                           This invention describes a novel composition (a) a first active agent, comprising oligonuclectides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonuclectides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, is an analogsic, hypotensite, immunosuppressive and cytostatic activity, is a content of the composition of the composition in the oligonucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             surfactant depletion; antiallergic; antianflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 genetic engineering, pharmacogenomics, studying gene function, and g mapping (e.g., of single nucleotide polymorphisms).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to composition and or to increase the degradation of the target mRNA or to complete the amount of target polypeptide present in the lungs. The complete the manual of target polypeptide present in the lungs. The complete sand/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, complete sand/or surfactant hypoproduction are associated confilammation, allergies, asthma, impeded respiration, respiratory confilammation, emphysema, chronic obstructive pulmonary disease, pulmonary contrension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to configuration the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the art, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise can be deserved to the polypeptides of the polypeptide act polypeptides are useful to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptides. The PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for modulating the biological activity of a cell expressing a PRO polypeptides are useful for polypeptides are useful for stimulating the biological activity of a cell expressing PRO polypeptides are useful for polymeptides or polymeptides are useful for stimulating the proliferation of the proliferation of chorestors. These are useful for stimulating the proliferation of polypeptides are useful for stimulating proliferation of critical neurons or rod photoseceptor cells, inducing c-fos in endohelial cells, modulating the proliferation of critical neurons or rod photoseceptor cells, inducing proliferation of critical neurons or rod photoseceptor cells, inducing proliferation of critical critical critical critical critical proliferation and/or recombinant precipital proliferation of proliferation of critical proliferation of critical proliferation of critical proliferation of critical proliferation of probes are useful in molecular biology including uses as hybridisation probes are useful in molecular biology including uses as hybridisation probes critically useful reagents, for generating transgenic cannals or knockout animals which are useful in the development and composite canalysis of individuals with genetic disorders as well as for recombinant proliferation of proliferatio

```

AND AND AND

```
The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The pro polypeptide activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17-SEP-1998

The polymucleotides cells in cell death. The polymucleotides cells in cells, in the generation of antisense RNA central propertides, for generating transgenic cells, inchinates and propertides, for generating transgenic cells, inchinates are useful in the development and cell central propertides are useful in the development and cell central propertides are useful in the development and cell central propertides are useful for the proteins are useful as molecular marker for protein electrophoresis cells, inchinately expressing the protein and for chromosome identification. The protein and for attentify the protein and for attentify the protein and for attentify the protein of proteins are useful for insumohistochemical staining and/or assay for properticularly for replacing a certain protein a

The invention discloses isolated PRO secreted/transmembrane polypeptides CC antibodies that specifically bind to the polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide for Inking a CC bioactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for inking a CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing PRO polypeptides in the PRO polypeptides or CC polymclectides are useful for stimulating the biological activity CC of a cell expressing PRO polypeptides. The PRO polypeptides or CC polymclectides are useful for stimulating the proliferation of endothelial cells, modulating the proliferation of control prophecytes, enhancing the survival or proliferation of control proliferation of control proliferation of control proliferation of control proliferation of collections or rod photoreceptor cells, inducing c-fos in endothelial CC cells, modulating glucose or FRA uptake, inducing proliferation and/or receptor cells, inducing c-fos in endothelial CC cells, modulating or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injurise (e.g. loss of sight due to cetinatis pigmentosum), obesity, diabetes, hyperinsulinaemia, cancerous control proliferation of genes which have a role in cell death. The polymclectides control process, in chromosome and gene mapping, in the generation of antisense RNA cc animals or kneckut animals which are useful for convening affect the genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The polymclectides and proteins are useful as molecular marker for protein electrophoreais control polypeptide (argonists) or prevent the effect of the propolypeptide (argonists) or prevent the effect of the polymclectides and proteins are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-SEP-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC CDNAS, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generation of antisense RNA CC animals or knockout animals which are useful in the development and CC screening of therapeutically useful reagents, as probes and for the CC genetic analysis of individuals with genetic disorders as well as for CC recombinantly expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis CC purposes, as therapeutic agents, for screening compounds to identify CC those that minic the PRO polypeptide (agenists) or prevent the effect of CC the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for continuous cochemical staining and/or assay of sample fluids. Anti-PRO CC antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity continuous also be used in gene therapy, particularly for replacing a CC defective gene. The sequence presented is a PCR primer which was used to CR genes may also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptides. The PRO polypeptides are useful for modulating the biological activity co fa cell expressing PRO polypeptides. The PRO polypeptides or polypucleotides are useful for stimulating the biological activity co fa cell expressing PRO polypeptides. The PRO polypeptides or polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of meonatal control of endothelial cells, modulating hypertrophy of meonatal proliferation of endothelial cells, modulating the proliferation of cretinal neurons or rod photoreceptor cells, inducing c-fos in endothelial cells, modulating glucose or FFA uptake, inducing proliferation and/or recells, modulating glucose or FFA uptake, inducing proliferation and/or recells, modulating or treating glucose or FFA uptake, inducing proliferation and/or recells, modulating or treating cardiac insufficiency disorders, wounds, cancerous cumours, retinal disorders or injuries (e.g. loss of sight due to retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, cardiac insufficiency disorders (e.g. sports injuries or arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polypucleotides are useful in molecular biology including uses as hybridisation probes of or cDNA library to isolate the full-length PRO cDNA or to isolate other processes and care magning in the generation of solate other.
                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated secreted and transmembrane PRO nucleic acids and the proteins they encode, e.g. PRO245, PRO269 and PRO1868, useful for preventing, diagnosing and treating e.g. disorders relating to blood coagulation.

New PRO polypeptide for preparing a medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. inflammatory diseases, cancer or acquired immunodeficiency syndrome.

Example 42; SEQ ID NO 286; 476pp; English.

detecting or treating cardiac insufficiency disorders, wounds, cancerous cumours, retinal disorders or injuries (e.g. loss of sight due to cretinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, the polymentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or dypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes component in chromosome and gene mapping, in the generation of antisense RNA commands or knockout animals which are useful in the development and corecembing of therapeutically useful reagents, as probes and for the generation analysis of individuals with genetic disorders as well as for creombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify cc and the nucleic acid encoding them. The polypeptides can be used to raise can tibodies that specifically bind to the PRO polypeptide, for linking a cc bioactive molecule to a cell expressing a PRO protein and for modulating ct least one biological activity of a cell. PRO polypeptides are useful cf for detecting other PRO polypeptides in a sample and for linking a chioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptides are useful complypeptide and for linking a chioactive molecule are useful for modulating the biological activity co f a cell expressing PRO polypeptides. The PRO polypeptides or complypeptides are useful as pharmaceuticals, diagnostics, biosensors or complypeptides are useful for stimulating hypertrophy of neonatal compositions. These are useful for stimulating hypertrophy of neonatal composition of endothelial cells, modulating the proliferation of confideration of conditions or composition of conditions of conditions or proliferation of colls, inducing c-fos in endothelial cells, modulating proliferation and/or receptor colls, inducing c-fos in endothelial cells, modulating proliferation and/or reconstruction of chondrocytes in particular, these are useful for colls, inducing c-fos in endothelial cells, contains and the conditions of chondrocytes. In particular, these are useful for colls, inducing c-fos in endothelial cells, contains and conditions and contains and co invention discloses isolated PRO secreted/transmembrane polypeptides

The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   13-NOV-2003.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human secreted/transmembrane protein, #53, PCR primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADE98672 standard; DNA; 19

cc and the nucleic acid encoding them. The polypeptides can be used to raise that gpecifically bind to the PRO polypeptides can be used to raise bioactive molecule to a cell expressing a PRO protein and for modulating a tleast one biological activity of a cell. PRO polypeptide, for linking a chicago the protein and for modulating control protein and the problem of the protein and for modulating a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide are useful for modulating the biological activity of a cell expressing a PRO polypeptides. The PRO polypeptides or cell expressing properties, protein proteins, biosensors or bioractors. These are useful for stimulating hypertrophy of meanatal heart, inhibiting vascular endothelial growth factor (PGG) stimulated profession of endothelial cells, modulating hypertrophy of meanatal cells, inhibiting vascular endothelial growth factor (PGG) stimulated cells, inducing profiferation of crombine or cod photoreceptor cells, inducing profiferation of crombine or cod profession of profiferation of crombine or cod profiferation cells, inducing profiferation and/or recells, modulating plucose or FRA uptake, inducing profiferation and/or recentriation, or bone or cartilage disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to cretinitis pigmentosum), obseity, diabetes, hyperinsulinaemia, probes or cartilage disorders (e.g. posts injuries or carthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in olacular biology including uses as hybridisation probes of corombinal profits and gene mapping, in the generating transgenic entrements of the proposes, as therapeutic agents, for generating transgenic other proteins are useful for the profits of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The profits of the profits of the profits of the polymucl genes may also be used in gene therapy, particularly for replacing sctive gene. The sequence presented is a PCR primer which was used tlify a PRO polynucleotide of the invention. to a

Example 42; SEQ ID NO 286; 473pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC bioactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptides are useful CC polypucleotides are useful for modulating the biological activity of a cell. PRO polypeptides or CC polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal CC proliferation of endothelial cells, modulating the proliferation of cc retinal neurons or rod photoreceptor cells, inducing c-fos in endothelial cells, modulating the proliferation of cells, modulating glucose or FPA uptake, inducing proliferation and/or receptor cells, modulating proliferation of cells, modulating the survival or proliferation of cells, modulating or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to certificate or better the certification of genes which have a role in cell death. The polymucleotides or cartilage disorders (e.g. sports injuries or arbitage are useful in molecular bloogy including uses as hybridisation probes cor convalitation of antisense RNA collars in call death are converted the collars because and gene mapping, in the generation of antisense RNA collars in call death are converted to the collars because and gene mapping, in the generation of antisense RNA collars in call as and gene mapping, in the generation of antisense RNA collars in call as a collars collars collars and collars collars collars collars collars.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC animals or knockout animals which are useful in the development and CC screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for CC recombinantly expressing the protein and for chromosome identification. CT The proteins are useful as molecular marker for protein electrophoresis CC purposes, as therapeutic agents, for screening compounds to identify CC those that minic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polymucleotides and proteins are CC useful for tissue typing. PRO antibodies are useful for tissue typing and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its captression in specific cells, tissues or serum and for affinity CC syrression in specific cells, tissues or serum and for replacing a CC expression in specific cells, tissues or serum and for replacing a CC defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

New PRO nucleic acid, useful for manufacturing a medicament diagnosing or treating tumor, for chromosome mapping or for diagnosing ဓ္ treating tumor, mapping tissue

Example 42; SEQ ID NO 286; 463pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise contribodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptide are useful contributions of detecting other PRO polypeptides in a sample and for modulating contrive molecule to a cell expressing a PRO polypeptides are useful contributions of a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides or contributions. These are useful for stimulating the biological activity of a cell expressing PRO polypeptides or polypeptides or useful as pharmaceuticals, disgnostics, biosensors or contributions. These are useful for stimulating hypertrophy of meonatal contributions or contributions of polypeptides. The PRO polypeptides or contributions or rod photoreceptor cells, inducing the proliferation of contributions or rod photoreceptor cells, inducing c-fos in endothelial colls, modulating the proliferation of contributions or rod photoreceptor cells, inducing proliferation and/or redetecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to contribute proliferation, or bone or cartilage disorders (e.g. sports injuries or artiritis) in mammals. PRO polypeptides and their portions affect the conversion of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes conversions and cent end cent converse and dense mapping, in the generation of antisense RNA. CC CDNAB, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generation of antisense RNA CC animals or knockout animals which are useful in the development and CC screening of therapeutically useful reagents, as probes and for the CC genetic analysis of individuals with genetic disorders as well as for CC recombinantly expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis CC purposes, as therapeutic agents, for screening compounds to identify CC those that mimic the PRO polypeptide (agonists) or prevent the effect of CC the PRO polypeptide (antagonists). The polymucleotides and proteins are useful for tissue typing. PRO antibodies are useful for cimmunohistochemical staining and/or assay of sample fluids. Anti-PRO CC antibodies are useful in diagnostic assays of sample fluids. Anti-PRO CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for replacing a CC defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.

e.g. PRO polypeptide useful for preparing a medicament for treating a dition that is responsive to the PRO polypeptide or anti-PRO antibody, inflammatory diseases, cancer or acquired immunodeficiency syndrome.

Example 42; SEQ ID NO 286; 473pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide for linking a CC bioactive molecule to a cell expressing a PRO procein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptide. The PRO CC polypeptide antibodies are useful for modulating the biological activity of a cell expressing a PRO polypeptide. The PRO CC polypeptides are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or CC polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC polynucleotides are useful for stimulating hypertrophy of meonatal CC proliferation of endothelial cells, modulating the proliferation of Endothelial cells, modulating the proliferation of CC proliferation of endothelial cells, modulating the proliferation of CC cells, modulating glucose or FFA uptake, inducing c-fos in endothelial CC cells, modulating c-fos in endothelial cells, modulating c-fos in endothelial CC cells, modulating candaccins or injuries (e.g. loss of sight due to constraint pagentosum), obesity, diabetes, hyperinsulinaemia, cancerous tumours, retinal disorders or carrilage disorders, wounds, cancerous contential propers or carrilage disorders, wounds, cancerous tumours injuries to great disorders, wounds, cancerous tumours promisers or carrilage disorders or injuries to great a concern to the concern to the c hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hybridisation probes for cDNA library to isolate the full-length PRO cDNA or to isolate other cDNAs, in chromosome and gene mapping, in the generation of antisense RNA and DNA, for preparing PRO polypeptides, for generating transgenic animals or knockout animals which are useful in the development and screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. recombinantly expressing the protein The proteins are useful as molecular

The polymucleotides and proteins are useful for tissue typing. PRO antibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; PCR; primer; 88; PRO; secreted; transmembrane; therapeutic; tissue typing; immunohistochemical staining; gene therapy; neonatal heart; vascular endothelial growth factor; VEGF; prolifer; endothelial cell; stimulated T-lymphocyte; retinal neuron; rod photoreceptor cell; c-fos; glucose; FPA; chondrocyte; cardiac insufficiency disorder; wound; cancer; tumour; retinal discretinitis pigmentosum; obesity; diabete; hyperinsulinaemia; hypoinsulinaemia; bone disorder; cartilage disorder; sport injury; arthritis; cardiant; vulnerary; cytostatic; ophthalmological;

4 4 4 gene therapy, in chromosome ar tissue typing, in identifying arthritis secreted and transmembrane PRO polypeptides and nucleic acids, useful gene therapy, in chromosome and gene mapping, as chromosome markers, tissue typing, in identifying chromosomes, and for treating e.g. tumor

Example 42; SEQ ID NO 286; 478pp; English

cc and the nucleid sold encoding them. The polypeptides can be used to raise bioactive molecule to a cell expressing a PRO protein and for modulating a bioactive molecule to a cell expressing a PRO protein and for modulating cf at least one biological activity of a cell. PRO polypeptides are useful cf activity of a cell. PRO polypeptides are useful cf activity of a cell expressing a PRO protein and for modulating cf of acell expressing a PRO protein and for modulating the biological activity of a cell expressing a PRO polypeptides or linking a collective molecule to a cell expressing a PRO polypeptides or polypeptides are useful for attending the biological activity of a cell expressing PRO polypeptides in a sample and for linking a collective molecule to a cell expressing a PRO polypeptides or cells interested in the protein and for the general analysis of individuals with genetic disorders as well as for purposes, as therapeutic agents, for generating transgenic communolist collection are useful for collection are invention discloses isolated PRO secreted/transmembrane polypeptides used to raise

probes, in DNA, and in nucleic acid encoding bes, in chromosome and , and in gene therapy f g a PRO polypeptide for use as hybridization d gene mapping, in generating antisense RNA and for treating e.g. cancer, Parkinson's disease

Example 42; SEQ ID NO 286; 471pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF)-stimulated

CC stimulated T-lymphocytes, enhancing the survival or proliferation of cretinal neurons or rod photoreceptor cells, inducing c-fos in endothelial cells, modulating ylucose or FFA uptake, inducing yelleration and/or re cells, modulating ylucose or FFA uptake, inducing proliferation and/or re cells, modulating ylucose or FFA uptake, inducing proliferation and/or re cells, modulating ylucose or FFA uptake, inducing proliferation and/or re cells, modulating of chondrocytes. In particular, these are useful for cells inducing or creatilation and/or re certination of chondrocytes. In particular, these are useful for cells in the proteins of sight due to certinatia pigmentosum), obesity, diabetes, hyperinsulinaemia, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to certinatia pigmentosum), obesity, diabetes, hyperinsulinaemia, cancerous certinatia pigmentosum), obesity, diabetes, hyperinsulinaemia, cancerous certinatia pigmentosum), obesity, diabetes, hyperinsulinaemia, cancerous certinatia pigmentosum, obesity, diabetes, hyperinsulinaemia, cancerous certinatia in molecular biology including uses as hybridsation probes certinatia pigmentosum, in the provides affect the cexpression of genes and gene mapping, in the generation of antisense RNA certinating properticals, in the generation of antisense RNA certinals or knockout animals which are useful in the development and certening of therapeutically useful reagents, as probes and for the certinals or knockout animals which are useful in the development as for recombinantly expressing the protein and for chromosome identify at proteins are useful as molecular marker for protein electrophoresis certinates are useful for tissue typing. PRO antibodies are useful for identify certination of proteins are useful for the proteins are useful in diagnostic assays for proteins and proteins are useful for identify certination of proteins are combinant cell culture or natural sources. The certination of proteins are combinant cell culture or natural source

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptide, for linking a cC bioactive molecule to a cell expressing a PRO polypeptide, for modulating a cC bioactive molecule to a cell expressing a PRO polypeptide are useful cfor detecting other PRO polypeptides in a sample and for linking a cC bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide in a sample and for linking a cC plypeptide antibodies are useful for modulating the biological activity cf a cell expressing PRO polypeptides. The PRO polypeptides or cC polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of monatal chart, inhibiting vascular endothelial growth factor (VEG)-stimulated proliferation of endothelial cells, modulating the proliferation of cc stimulated T-lymphocytes, enhancing the survival or proliferation of cretinal neurons or rod photoreceptor cells, inducing c-fos in endothelial cc ells, modulating proliferation and/or recalls, modulating or treating cardiac insufficiency disorders, wounds, cancerous cumours, retinal disorders or injuries (e.g. loss of sight due to retinitia pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartifies and their nortions affect the cartificial in mammals appropriations and sports injuries or arthritis in mammals appropriates and their nortions affect the
              CONAS, in chromosome and gene mapping, in the generation of antisense RNA cand DNA, for preparing PRO polypeptides, for generating transgenic animals or knockout animals which are useful in the development and screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polymuclectides and proteins are useful for tissue typing. PRO antibodies are useful for tissue typing and/or assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    02-DEC-1999

PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hybridisation probes for cDNA library to isolate the full-length PRO cDNA or to isolate other.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated nucleic acid encoding a polypeptide useful applications e.g. hybridization probes.

analogues. The invention is useful for evaluating candidate antisense oligomer for its ability to inhibit gene expression. The invention is also useful for treating leukaemia or viral infection such as cytomegalovirus (CMV), herpes simplex virus (HSV)-1, HSV-2, HTLV-1, humnimmuno deficiency virus (HIV)-1, HIV-2, hepatitis B virus (HBV), human papilloma virus (HPV), VZV, influenza virus and rhinovirus. The present

human

invention relates to novel nucleomonomer and

oligomer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC bioactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptides. The PRO CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing PRO polypeptides. The PRO CC polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC polynucleotides are useful for stimulating hypertrophy of neonatal CC heart, inhibiting vascular endothelial growth factor (VRGP)-stimulated CC proliferation of endothelial cells, modulating the proliferation of CC stimulated T-lymphocytes, enhancing the survival or proliferation of CC retinal neurons or rod photoreceptor cells, inducing proliferation of CC cells, modulating glucose or PRA uptake, inducing proliferation and/or receptor cells, modulating the proliferation of CC cells, modulating cardiac insufficiency disorders, wounds, cancerous cumours, retinal disorders or injuries (e.g. loss of sight due to CC thirtitis pigmentosum), obseity, diabetes, hyperinsulinaemia, cancerous CC tumours, retinal disorders or injuries (e.g. sports injuries or artifitis pigmentosum), obseity, diabetes, hyperinsulinaemia, cancerous CC expression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes CC arimals or knockout animals which are useful in the development and CC canimals or knockout animals with genetic disorders as well as for creombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis countries is dentify. For screening compounds to identify

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          purposes, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (antagonists) or prevent the effect of the PRO polypeptide (antagonists). The polymucleotides and proteins are useful for tissue typing. PRO antibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise contributed that specifically bind to the PRO polypeptide, for linking a compositive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful compositive molecule to a cell expressing a PRO polypeptides are useful for modulating a compositive molecule to a cell expressing a PRO polypeptides of a cell expressing a PRO polypeptides or the PRO polypeptides are useful as pharmaceuticals, diagnostics, biosensors or polymentides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. The PRO sequences can be used in gene and protein therapy. The PRO polypeptides are useful as pharmaceuticals, diagnostics, biosensors or condition which is responsit or antagonist or the anti-PRO antibody. The properties are useful as medicament for the treatment of a condition which is responsive to the PRO polypeptide, the agonist or antagonist or the area are useful and protein the accides encoding PRO composition of a medicament for the treatment of a condition which is responsive to the PRO polypeptide, the agonist or antagonist or the area also useful in the development and screening of useful reagents, in chromosome identification or for tissue typing. The composition are also useful in gene therapy, may be employed as consisting protein electrophoresis or as therapeutic agents. Anti-PRO antibodies are useful in diagnostic assays or for the afformation of PRO for recombinant cell culture or natural consisting protein in the development and screening of a protein electrophoresis or as therapeutic agents. The sequence presented is a PCR primer which was used to amplify a PRO polymented of the invention.

Novel isolated native PRO polypeptide useful for tissue typing, an molecular weight markers in protein electrophoresis, for treating enterocolitis, Zollinger-Ellison syndrome, congenital microvillus atrophy

Example 42; SEQ ij ö 286; 470pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal raise ng a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC cells, modulating glucose or FFA uptake, inducing proliferation and/or re-
CC differentiation of chondrocytes. In particular, these are useful for 
CC differentiation of chondrocytes. In particular, these are useful for 
CC differential discorders or injuries (e.g. loss of sight due to 
CC retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, 
CC hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or 
CC arthritis) in mammals. PRO polypeptides and their portions affect the 
CC expression of genes which have a role in cell death. The polynucleotides 
CC are useful in molecular biology including uses as hybridisation probes 
CC are useful in molecular biology including uses as hybridisation probes 
CC are useful in molecular biology including uses as hybridisation probes 
CC are useful in molecular biology including uses as hybridisation probes 
CC animals or knockout animals which are useful in the generating transgenic 
CC animals or knockout animals which are useful in the development and 
CC screening of therapeutically useful reagents, as probes and for the 
CC genetic analysis of individuals with genetic disorders as well as for 
CC genetic analysis of individuals with genetic disorders as well as for 
CC those that mimic the PRO polypeptide (agonists) or prevent the effect of 
CC those that mimic the PRO polypeptide (agonists) or prevent the effect of 
CC the PRO polypeptide (antagonists). The polynucleotides and proteins are 
CC immunohistochemical staining and/or assay for PRO e.g. detecting its 
CC expression in specific cells, tissues or serum and for affinity 
CC purisionies are useful in diagnostic assays for PRO e.g. detecting its 
CC expression in specific cells, tissues or serum and for affinity 
CC penes may also be used in gene therapy, particularly for replacing a 
CC amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

New isolated or recombinant Rpi-blb nucleic acids and proteins, useful for providing members of the Solanaceae family e.g. Solanaceae tuberosum
                                                                                                                             resistance against comycete infection.
```

Example 7; SEQ ID NO 26; 98pp; English.

disease, in particular comycete infections. The DNA sequence encodes a protein which may provide a plant or its progeny with at least partial resistance against an comycete infection caused by phytophthora infestans. The invention may be useful for the development of compounds with a fungicide activity. The DNA sequence of the invention encodes an Rpi-blb protein comprising 970 amino acids. The nucleic acid, vector, cell, protein or binding molecule is useful for providing a plant or its progeny with resistance against an comycete infection such as late blight (a disease of major importance to production of Solanaceae such as potation and tomato cultivars). The present sequence is that of a PCR primer which was used in the exemplification of the invention. This invention relates to a novel DNA sequence in the field of plant equence encodes

The polypeptides can be used to raise contributes that specifically bind to the PRO polypeptide, for linking a contributive molecule to a cell expressing a PRO protein and for modulating contributive molecule to a cell expressing a PRO protein and for modulating contributive molecule to a cell expressing a PRO protein and for modulating contributive molecule to a cell expressing a PRO polypeptide. The PRO colypeptide antibodies are useful for modulating the biological activity of a cell expressing a PRO polypeptide. The PRO colypeptides are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or conditions. The PRO polypeptide or antibody can be used in the proparation of a medicament for the anti-PRO antibody. The pRO polypeptides are useful for antagonist or the anti-PRO antibody. The nucleic acids encoding PRO colypeptides are useful and probes for gene mapping, condition which is responsive to the PRO polypeptide, the agonist or conditions which is responsive to the PRO polypeptide, the agonist or conditions which is responsive to the PRO polypeptide, the agonist or conditions which is responsive to the PRO polypeptide anciding PRO conditions which is responsive to the PRO polypeptide, the agonist or conditions and streaming of conditions which is responsive to the probes for gene mapping. The polypeptides are useful in the development and screening of conditions and conditions are discussed in the probatic assays or for the probatic antibodies are useful in diagnostic assays or for the conditions are purification of prof for recombinant cell culture or natural sources. The sequence presented is a PCR primer which was used to amplify a PRO polymerication of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

PRO1868, useful ng squamous cell two isolated nucleic acids encoding a PRO polypeptide, e.g. PRO245 01868, useful for treating psoriasis and epithelial cancers such as squamous cell carcinoma.

2004-020479/02

Example 42; SEQ ID NO 286; 426pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a coll east one biological activity of a cell. PRO polypeptide. The linking a coll content properties in a sample and for modulating content properties are useful for modulating a properties or polypeptide into polypeptides. The PRO polypeptides or polypeptide into polypeptides in a sample and for linking a coll expressing PRO polypeptides or polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides or polypeptides or polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or collar polypeptides or polypeptide (appears and polypeptide (appears of polypeptides and proteins and proteins are useful for tissue typing. PRO antibodies are useful for assay of sample fluids. Anti-PRO continuous in specific cells, tissues or serum and for affinity

New isolated secreted and transmembrane PRO nucleic acids and polypeptides, useful for preventing, diagnosing and treating associated with their aberrant expression and activity. and disorders

Example 42; SEQ ID NO 286; 476pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise can be used to raise and the nucleic specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO polypeptide and for modulating can be useful cor detecting other PRO polypeptides in a sample and for linking a coll expressing PRO polypeptide. The PRO polypeptide are useful for stimulating the biological activity of a cell expressing a PRO protein and for modulating collipse in inhibiting vascular endothelial colls, modulating the biological activity of theart, inhibiting vascular endothelial growth factor (VEGF) estimulated colleps, modulating hypertrophy of neonatal cells, indiving a protein and/or recills, modulating gradiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g., loss of sight due to retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g., sports injuries or retinitis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes of collabation of therapeutically useful reagents, as probes and for the generation of antibense RNA in chromosome and gene mapping, in the generating transgenic canimals or knockout animals which are useful in the development and cor the propense as the respective and for chromosome dentification. The polymucleotides are useful for tissue typing. PRO polypeptides are useful for the proteins are useful in diagnostic assays for PRO e.g. detecting its empression in specific cells, tissues or serum and for activations are useful for cumunities of the proteins are useful as part by the proteins are useful for collabation of PRO

tissue manufacturing a PRO nucleic typing. acid, useful for producing a PRO polypeptide, medicament for diagnosing or treating tumor, or

### Example 42; SEQ Ħ ö 286; 474pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bioactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptide. The PRO CC polypeptide antibodies are useful for modulating the biological activity CC polypeptide antibodies are useful for modulating the biological activity CC polypeptides are useful as pharmaceuticals, diagnostics, biosensors or CC polypucleotides are useful for stimulating typertrophy of meonatal CC hierartion of endothelial cells, modulating the proliferation of Estimulated T-lymphocytes, enhancing the survival or proliferation of CC retinal neurons or rod photoreceptor cells, inducing c-fos in endothelial CC ells, modulating glucose or FFA uptake, inducing proliferation and/or receptor modulating proliferation of cells, modulating or treating cardiac insufficiency disorders, wounds, cancerous cumours, retinal disorders or injuries (e.g. loss of sight due to CC retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or CC arthritis) in mammals. PRO polypeptides and their portions affect the CC expression of genes which have a role in cell death. The polymucleotides CC are useful in molecular biology including uses as hybridisation probes CC for cDNA library to isolate the full-length PRO cDNA or to isolate other CC cDNAs, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generating transgenic CC animals or knockout animals which are useful in the development and CC genetic analysis of individuals with genetic disorders as well as for CC recombinantly expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis CC purposes, as therapeutic agents, for screening compounds to identify CC these PRO polypeptide (antagonists). The polymucleotides and proteins are CC useful for tissue typing. PRO antibodies are useful for classue typing and/or assay of sample fluids. Anti-PRO CC antibodies are useful in diagnostic assays for PRO e.g. detecting its Cxpression in specific cells, tissues or serum and for affinity CC purification of PRO from recombinant cell culture or natural sources. The CC purification be used in gene therapy, particularly for replacing a CC defective gene. The sequence presented is a PCR primer which was used to CC amplify a PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 16; Conservative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptide with defined sequences given in the specification; a sequence capable of hybridizing to a melanin-concentrating hormone receptor 1 (MCHR1) gene; a polymucleotide encoding an MCHR1 polypeptide; or a sequence comprising one or more of the nucleotide exchanges (SNP's) given in the specification and at least 8 bases of surrounding sequence of the MCHR1 gene. The composition has anorectic activity. The polymucleotide composition may be used in gene therapy to treat the disorders of the invention. The composition is useful for diagnosing obesity related to the disorder. The MCHR1 protein or polymucleotide is useful for preparing a medicament for treating or preventing obesity related to the disorder. The MCHR1 protein or polymucleotide is useful for preparing a medicament for treating or preventing obesity related to the presence of a molecular variant of the MCHR1 gene. This polymucleotide by the composition of the MCHR1 gene.

New nucleic acid encoding a PRO polypeptide, useful recombinant PRO polypeptide and for treating tumors for producing a by gene therapy.

Example 42; SEQ ID NO 286; 471pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptides for linking a bioactive molecule to a cell expressing a PRO polypeptides. The PRO polypeptides are useful for a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides are useful for stimulating hypertrophy of neonatal chart, inhibiting vascular endothelial growth factor (VEGP)-etimulated Tolymphocytes, enhancing the survival or proliferation of stimulated Tolymphocytes, enhancing the survival or proliferation of conditating plucose or PFA uptake, inducing proliferation and/or recells, modulating plucose or PFA uptake, inducing proliferation and/or recells, modulating plucose or PFA uptake, inducing proliferation and/or recentration of chondrocytes. In particular, these are useful for disterting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to expression of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hypritidisation probes are useful in molecular biology including uses as hypritidisation for the genetic analysis of individuals with genetic disorders as well as for combinantly expressing the protein and for chromosome identification. The proteins are useful in the development and corrections are useful for classific (all as molecular marker for protein electrophoresis uprobes, as therapeutic agents, for screening compounds to identify these that mimic the PRO polypeptides (asyonists) or prevent the effect of the PRO polypeptide (antapolicus are us

Isolated secreted and transmembrane PRO nucleic acids and the proteins they encode, e.g. PRO245, PRO269 and PRO1868, useful for preventing, diagnosing and treating e.g. disorders relating to blood coagulation.

**Example** 42; SEQ ID NO 286; 478pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing a PRO polypeptides or polypeptides are useful as pharmaceuticals, diagnostice, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGP)-stimulated

```
CC hypoinsulfinaemia, or bone or cartilage disorders (e.g. sports injuries or carthritis) in mammals. PRO polypeptides and their portions affect the carpression of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hybridisation probes company to isolate the full-length PRO cDNA or to isolate other colnna, in chromosome and gene mapping, in the generation of antisense RNA commands or knockout animals which are useful in the development and commands or knockout animals which are useful in the development and commands or knockout animals which are useful in the development and commands or knockout animals which are useful in the development and commands or knockout animals which are useful in the development and compensity expersing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis composes, as therapeutic agents, for screening compounds to identify the protein are useful for the PRO polypeptide (antagonists). The polynucleotides and proteins are cuseful for tissue typing. PRO antibodies are useful for commonistochemical staining and/or assays for PRO e.g. detecting its cappression in specific cells, tissues or serum and for affinity compositions are useful in diagnostic assays for PRO e.g. detecting its cappression in specific cells, tissues or serum and for affinity compositions are useful for replacing a defective gene. The sequence presented is a PCR primer which was used to complish a PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

Count the nucleic acid encoding them. The polypeptides can be used to raise collective molecule to a cell expressing a BRO protein and for modulating cat least one biological activity of a cell. PRO polypeptides are useful continued and continued activity of a cell. PRO polypeptides are useful continued and continued and continued and continued activity of a cell. PRO polypeptides are useful continued and continued and continued activity of a cell. PRO polypeptides are useful continued and continued and continued activity of a cell expressing a PRO polypeptides.                                    The invention describes a new isolated nucleic acid comprising a fully defined sequence having 23574 bp or at least its 50 or 15 contiguous nucleotides and includes; allele G of single nucleotide polymorphism (SNP) AB+2; allele G of SNP BC+1; and allele C of SNP BC+2. The invention describes identifying increased susceptibility to a disorder comprising asthma, bronchial hyperresponsiveness, atopy, chronic obstructive lung disease and adult respiratory distress syndrome in a subject comprising testing a biological sample obtained from a subject for the presence of at least one allele or haplotype given in the specification, where the presence identifies an increased susceptibility to the disorder. The nucleic acid is useful for preparing a composition for treating disorders obstructive lung disease and adult respiratory distress syndrome. This sequence represents a primer used to detect single nucleotide
                                                                                                                                                                                                                                                                                 Gene 216 nucleic acid, useful for preparing a composition for tre disorders e.g., asthma, bronchial hyperresponsiveness, atopy, chr obstructive lung disease and adult respiratory distress syndrome.
                                                                                                                                                                                                                                                                                                                                                                     Keith

and the mucleic acid encoding them. The polypeptides can be used to raise can be deartow molecule to a cell expressing a PRO protein and for modulating a bioactive molecule to a cell expressing a PRO protein and for modulating of or detecting other PRO polypeptides in a sample and for modulating the bioactive molecule to a cell expressing a PRO polypeptides are useful for detecting the biological activity of a cell. PRO polypeptides are useful for modulating the biological activity of a cell expressing pRO polypeptides. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing pRO polypeptides. The PRO polypeptides or plymulacitides or colliptication of endothelial cells, modulating the proliferation of colliptication of stimulated T-lymphocytes, enhancing the survival or proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of colliptication of chondrocytes. In particular, these are useful for cells, modulating glucose or PRA uptake, inducing c-fos in endothelial cells, modulating proliferation and/or redifferentiation of chondrocytes. In particular, these are useful for cells, modulating plucose or PRA uptake, inducing proliferation and/or redifferentiation of chondrocytes. In particular, these are useful for cretinal disorders so injuries (e.g. loss of sight due to arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hybridistion probes or proparing of therapeutically useful reagents, as probes and for the processing of therapeutically useful reagents, as probes and for the genesic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The provision of authories are useful for seminated (e.g. aphile of the provision and provision of artication of polypeptide (e.g. provision of proteins are useful for useful in the descrip invention discloses isolated PRO the nucleic acid encoding them. 7 O secreted/transmembrane polypeptides The polypeptides can be used to rais o the PRO polypeptide, for linking a

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating can be useful come biological activity of a cell. PRO polypeptides are useful cfor detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptides or the PRO polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides or comply comply comply the biological activity of a cell expressing a PRO polypeptides or polypeptides are useful for stimulating the biological activity of a cell expressing a PRO polypeptides or comply comply comply the biological activity of a cell expressing a PRO polypeptides or comply comply comply the survival comply comply of neonatal comply compl

The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                     The present invention relates to a polynucleotide isolated from a human gene and is useful for detecting a single nucleotide polymorphism in a human gene or for diagnosing of disease. The invention enables the detection of a single nucleotide polymorphism in a human gene. The present sequence represents a primer of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel polynucleotide useful for PCR amplification along with two DNA fragment from another set of sequences, or for detecting single nucleotide polymorphism in human gene.
                                                                                                                                                                                                                                                                                                                                                                                                        Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              08-MAR-2002; 2002JP-00064373.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADK98188 standard; DNA; 19 BP
